# FVTRP-QCT

The FVTRP-QCT QC Vent Tube Strength Tester is a portable hard case testing station built to quality test the custom RFID chip set of a vent tube with PC based management software that allows for specific levels of Vent Tube Strength measurable and displayable for each Vent Tube. In the event of a failed or failing vent tube, the display will show a low strength indication number (below 60) or no tag detected. In the event of a good or strong vent tube, the display will show a high strength indication number (60-250).

1

Power On Tester

2

Tester shows no tag seen to indicate ready

3

Strength Indication number over 60 is good, under 60 value or "No Tag Seen" is a bad tag.

NOTE: The QCT Strength Indication numbers will not match 100% with the strength indication shown on the Filler Vent Tube Reader Touch Screen as antennae distances and detection angles will differ
